

Arnav Dashaputra

Princeton, New Jersey • arnav.dashaputra@gmail.com

Portfolio: dashaputra.net • LinkedIn: linkedin.com/in/dashaputra • GitHub: [ArnavD74](https://github.com/ArnavD74)

Data scientist with a software engineering background and experience in predictive modeling, machine learning, full-stack development, and cloud infrastructure. Adept at translating business needs into results-focused applications.

SKILLS

- **Languages/Frameworks:** Python, JavaScript, TypeScript, React, Django, Tanstack, Bootstrap, Node.js, Java, XML, C#.
- **Data/ML:** pandas, NumPy, scikit-learn, XGBoost, LightGBM, GLMs, SHAP, seaborn, SQL, Jupyter, Anaconda, R, Tableau.
- **Other:** REST APIs, AWS Microservices, OpenAI API, Docker, Kubernetes, RAG, Bash, Git, CI/CD, IaC, LaTeX, Figma.

PROFESSIONAL EXPERIENCE

Data Scientist

Princeton, NJ

AmTrust Financial Services, Inc.

January 2026 – Present

- Developed and deployed predictive models for insurance risk assessment leveraging Python and ML frameworks.
- Built automated data pipelines and analytical tools to derive actionable insights from large-scale financial datasets.

Software Engineer

Middletown, DE

Stealth AI Health-tech Startup

March 2025 – January 2026

- Shipped enterprise-ready React MVPs and POCs used in C-suite demos at national healthcare payers to accelerate buy-in and secure pilot commitments. Stack includes React Router/Hooks, and AWS Cognito/Amplify/CodePipeline.
- Architected cloud-native healthcare infrastructure (HL7 FHIR) on AWS using Docker, EC2, Lambda, and RDS/SQL.
- Led technical interviews for SWE and DevOps candidates; evaluated 15+ engineers and held final hiring authority.

AI/ML Engineer

San Rafael, CA

Got Users

September 2025 – March 2026

- Built an end-to-end text analytics platform using OpenAI embedding-based semantic retrieval, interpretable ML modeling, and k-means clustering (FAISS) to analyze text mediums, extract features, and generate style guidelines.
- Engineered ML pipeline for text normalization, embedding computation, and readability analysis; used cosine-similarity semantic search and Gemini-based content synthesis for polishing drafts based on generated guidelines.

Solutions Architect

New York, NY

Phillipvn Photography LLC

April 2025 – December 2025

- Architected a serverless SaaS platform on AWS using React, Cognito authentication, API Gateway with JWTs, Lambda (boto3), DynamoDB, EventBridge scheduling, Pinpoint messaging, and IaC with SAM and CloudFormation.
- Integrated Stripe Checkout and Billing Portal APIs with webhook processing via Lambda for updating user states in DynamoDB; implemented least-privilege IAM, CORS/security hardening, and scripted deployments (Git, CI/CD).

Center Director / Sr Instructor

Bridgewater, NJ

Code Ninjas (Bridgewater, Green Brook, and Hillsborough, NJ)

October 2020 – Present

- Recruited and trained 75+ employees and interns; held workshops to improve teaching and leadership qualities.
- Improved customer registrations by 60% through authoring innovative programming curricula (Scratch, JavaScript, Unity/C#) for over 500 students, held during 36 week-long camp sessions across three separate branch locations.

Technology Labs Consultant

Piscataway, NJ

Rutgers University Office of Information Technology

May 2022 – December 2024

- Diagnosed an average of 50 technical issues per week using ServiceNow and IDMS; reduced resolution times by 20% through proactive monitoring, effective triage, efficient troubleshooting, and streamlined collaboration.

INDEPENDENT PROJECTS (files available on GitHub)

Tangerine — Discord automation and moderation tool (Node.js, Express, MongooseDB)

- Built and operated a real-time Discord service for advanced moderation and growth utilities; deployed on Heroku with horizontal scaling and instrumentation, at peak supporting **300K+ daily users** across 1,000+ unique servers.

Numeric Digit Identification using K-Means Clustering (Python, scikit-learn, pandas)

- Built end-to-end preprocessing pipeline (imputation/encoding/scaling) and implemented K-Means tuned with elbow & silhouette, then produced EDA and cluster-profile summaries to identify distorted digits from a 2D canvas.

EDUCATION

Rutgers, The State University of New Jersey

New Brunswick, NJ

- **Bachelor's degree: Computer Science;** Minor: Data Science

September 2021 – December 2024
